## PROFESSIONAL SUMMARY

Site Reliability Engineer with 3+ years of experience ensuring high availability, performance, and scalability of enterprise production systems for global clients including Starbucks. Skilled in incident management, observability, infrastructure automation, and AI-driven operations (AIOps). Maintained 99.9%+ uptime, cut MTTR by up to 40% through structured triage and AI-assisted root-cause analysis, and reduced manual toil by 40%+ through Infrastructure as Code and scripting. Also builds cloud-native reference projects end to end: FastAPI service, CI/CD with GitHub Actions, Docker, Kubernetes, Helm, and Prometheus monitoring. Reliability-first, automation-first collaborator across SRE, DevOps, and engineering teams.

## CORE SKILLS

**Observability & Monitoring:** Datadog, Splunk, Grafana, Prometheus, OpenTelemetry, PagerDuty, ServiceNow

**Cloud, DevOps & IaC:** Kubernetes (Deployments, Services, probes, autoscaling/HPA), Helm, Docker, Terraform, Ansible, Chef, CI/CD (GitHub Actions, Jenkins), Git/GitHub, AWS/Azure fundamentals

**AIOps & AI-Assisted Operations:** AI/ML-based anomaly detection, predictive alerting, alert-noise reduction, runbook automation, log-pattern analysis with AI tools

**Incident & Reliability Management:** Incident/Problem Management, On-Call Response, Root Cause Analysis (RCA), SLA/SLO/SLI Management, MTTR Reduction, Capacity Planning

**Scripting & Programming:** Python, FastAPI, Pytest, Shell/Bash, SQL, SQLite, REST APIs, Java basics

**Data & Reporting:** Power BI, Tableau, Excel, SQL, Dashboarding, Confluence

**Systems & Security:** Linux & Windows Server Administration, Patch Management, Security Compliance

## PROFESSIONAL EXPERIENCE

### Capgemini — Site Reliability Engineer (Associate Consultant)

2023 – Present

*SRE, Starbucks Account (Global Enterprise Infrastructure)*

- Own end-to-end reliability for enterprise production systems supporting a global retail client, sustaining **99.9%+ uptime** by proactively monitoring with Datadog and Splunk and flagging risk before customer impact.
- Lead incident response using PagerDuty and Jira, applying structured triage and AI-assisted log correlation to reduce **MTTR by 30–40%**.
- Introduced AI/ML-based anomaly detection and predictive alerting into the monitoring stack, cutting alert noise and false positives so on-call engineers focus on real incidents.
- Automated deployment, patching, and routine maintenance with Shell, Terraform, and Ansible, cutting **manual operational effort by 40%+** and reducing human error.
- Analysed logs and performance metrics across distributed services to identify recurring failure patterns, **decreasing repeat incidents by 25%**.
- Performed Linux/Windows server administration, patch management, and security compliance updates across production and staging environments.
- Built executive-ready reliability dashboards and SLA/SLO reports in Power BI, giving leadership real-time visibility into system health.

## PROJECTS

### Cloud-Native E-Commerce Order-Processing Platform with SRE Observability

Personal Project

*Python, FastAPI, SQLite, Pytest, GitHub Actions, Docker, Kubernetes, Helm, Prometheus*

- Built an order-processing REST service with **Python, FastAPI, and SQLite**, backed by an automated **Pytest** suite and version-controlled on GitHub.
- Created a **GitHub Actions CI pipeline** that automatically runs tests, builds the **Docker** image, and validates the **Helm** chart, catching defects before deployment.
- Authored **Kubernetes** configurations for Deployment, Service, health checks (liveness/readiness), configuration management, and **autoscaling**, packaged as a reusable **Helm** chart.
- Instrumented the application with **Prometheus metrics** to expose service health and performance for monitoring and alerting.

## EDUCATION

### B.E., Electronics & Communication — P.E.S. College of Engineering, Mandya, Karnataka

2019 – 2023

## AWARDS & RECOGNITION

- Female Rockstar Award — Starbucks Account, Capgemini (2025) | Super Squad Award — Capgemini (2024)
